

# TAO Digital frontend assignment

## Objective of the assignment

To create a user onboarding flow based on [this mockup](https://dribbble.com/shots/15669113-Onboarding-Exploration) : <https://dribbble.com/shots/15669113-Onboarding-Exploration>

## The deliverables

1. A hosted page which demonstrates the onboarding screen with all the necessary interactions based on the mockup. You can use ngrok, netlify, heroku, etc.

**Note** - You don't have to make the dribbble website, you have to make the onboarding UI which is shown in the mockup images

2. Code hosted on github or bitbucket. You must use ReactJS to make the project.
3. Please send both the above links to the recruiter.

## Criteria the assignment will be evaluated on

1. How accurate your UI is to the design in the given mockup
2. Whether your code is extensible / scalable
3. How readable your code is (code quality)
4. How you organize your codebase
5. How well your UI works across devices

## Things to keep in mind

1. You can take upto 48 hours to complete the assignment. If you need more time, please let the admin panel know about that.
2. You can use "Inter" as the choice of font for this assignment
3. To use the same icons as given in the mockup, you can take a screenshot of the mockup and snip out the icons and then use them in your code.
4. There is no need for any server side implementations. All variables / states can be kept static on the frontend itself.
5. You can use any CSS framework / packages / modules you want as long as your UI is the same as the mockup shared.
